COURSES

Master in Flutter Development -

Red and White Multimedia Education

PASSIONS

Passionate about creating intuitive, high-quality mobile applications that enhance user experience and functionality across platforms.

PERSONAL PROJECTS

Instagram-like Social Media App

🌐 <https://github.com/jagritixjha/instagram>

The Instagram Clone App is a mobile application built with Flutter that mimics the core functionalities of Instagram. It leverages Firebase for backend services, allowing users to perform CRUD operations such as creating, reading, updating, and deleting posts.

- Implemented features such as **post creation, liking, commenting, and following users**.
- Utilized **Firebase** for real-time database updates and user authentication.
- Integrated **state management** to ensure smooth interaction and responsive UI.

Wallify – Wallpaper App

🌐 <https://github.com/jagritixjha/wallify>

Short summary of your work

- Designed an app for browsing wallpapers with a search bar, categories, and preview options.
- Integrated **Pexels API** and implemented **wallpaper setting features** for lock and home screens.

Platform Converter App

🌐 https://github.com/jagritixjha/platform_converter_app

Platform Converter is a Flutter app that provides an efficient solution for managing contacts, chats, calls, and profile settings. It supports both Android and iOS UI styles, with a toggle to switch between them, and includes light and dark theme options, with settings stored using persistent local storage.

- Developed a cross-platform app using **Flutter** that switches between Android and iOS UIs.
- Features include adding contacts, chats, calls, and profile management with picture uploads.
- Integrated **SharedPreferences** for theme toggling and used **GitHub** for version control.

PERSONAL PROJECTS

Terrapedia App

🔗 <https://github.com/jagritixjha/terrappedia>

Terrapedia is an app designed to help users explore and view information about countries around the world. The app provides a simple and interactive interface where users can browse through countries, filter them by status, save their favorite countries locally, and view detailed information on each country.

- Built a Flutter app to explore countries with filtering options and **local storage** using SharedPreferences.
- Integrated APIs to fetch country data and provided a detailed view for each country.
